                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              "Complete genomic sequence of Corynebacterium glutamicum ATCC 13032."; Submitted (MAY-2002) to the EMBL/GenBank/DDBJ databases.
-!- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
-!- SIMILARITY: Belongs to the UPP0182 family.
Science 269:496-512(1995).
-!- SIMILARITY: BELONGS TO THE GLYCOSYLTRANSFERASE FAMILY 2. WAAE/KDTX
SUBFAMILY.

               resistance in Plasmodium falciparum from Thailand";
Mol. Biochem. Parasitol. 57.151-160(1993).
-!-PUNCITON's Energy-dependent efflux pump responsible for decreased frug accumulation in multidavay-resistant cells.
-!-SUBCELLULAR LOCATION: Integral membrane protein.
-!-MISCELLANBOUS: P. falciparum resistant to the drug chloroquine have multiple copies of the gene coding for MDR.
-!-SIMILARITY: Belongs to the ABC transporter family. MDR subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ---GGTPNKTACMYGGVTLHD

structure that is generated by displacement synthesis when DNA polymerase encounters the 5'end of a downstream Oxazaki fragment. Has 5'endo-/exonuclease and 5'pseudo-Y-endonuclease activities. Cleaves the junction between single and double-stranded regions of Inap DNA (By similarity). COPACTOR: Binds 2 magnesium ions per subunit (By similarity). SIMILARITY: Belongs to the xPG/RAD2 endonuclease family. FENI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3 KSEEINEKDIRKKSELQ-----GTALGNIKQIYYNSKA--ITSSEKSADQFLINTLLFK

Viruses; dsDNA viruses, no RNA stage; Poxviridae; Chordopoxvirinae; Yatapoxvirus. Yaba monkey tumor virus

NCBI\_TaxID=38804;

Amano H., Morikawa S., Ueda Y., Miyamura T.;
Amano H., Morikawa S., Ueda Y., Miyamura T.;
Mucleotide sequence of the central 50kbp region of Yaba virus DNA.";
Submitted (JUN-1998) to the EMEL/GenBank/DDBJ databases.
-!- FUNCTION: ACTS WITH RNA POLYMERASE TO INITIATE TRANSCRIPTION FROM EARLY GENE PROMOTERS. A DNA-DEPENDENT ATPASE ACTIVITY IS
ASSOCIATED WITH VETF.
-!- SUBUNIT: HETERODIMER OF A 70 kDa AND A 82 kDa SUBUNIT.
-!- SIMILARITY: Belongs to the helicase family. VETF subfamily.

    {RNA} (N).
    SUBUNIT: Each class of RNA polymerase is assembled from 9 to 14 different polypeptides. This subunit is the largest component of RNA polymerase I.
    SUBCELLULAR LOCATION: Nuclear.
    MISCELLANEOUS: Three distinct zinc-containing RNA polymerases were found in eukaryotic nuclei: polymerase I for the ribosomal RNA precursor, polymerase II for the mRNA precursor, and polymerase III for SS and tRNA genes.
    SIMILARITY: Belongs to the RNA polymerase beta' chain family.

subunit of the fission yeast Schizosaccharomyces pombe RNA polymerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ribosomal DNA units.
CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              InterPro; IPR007066; RNA_POl_Rpb1_3

SEQUENCE FROM N.A.

Chen J.M., Rawlings N.D., Barrett A.J.;

"Cloning and sequencing of human neurolysin, an oligopeptidase of family M3."; MEDLINE=20039619; PubMed=10574462; Nagase T., Ishikawa K.-I., Kikuno R., Hirosawa M., Nomura N., family M3."; Submitted (JAN-2001) to the EMBL/GenBank/DDBJ databases. SEQUENCE FROM N.A.

"Prediction of the coding sequences of unidentified human genes. XV. The complete sequences of 100 new cDNA clones from brain which code for large proteins in vitro.",

DNA Res. 6.337-345(1999)
-!- FUNCTION: Hydrolyzes oligopeptides such as neurotensin,

bradykinin, dynorphin A, etc. (By similarity).
-!- CATALYITC ACTIVITY: Preferential cleavage in neurotensin: 10-Pro.!-Tyr-1!
-!- COFACTOR: Binds 1 zinc ion per subunit (By similarity).
-!- SINCELDIAR LOCATION: Mitochondrial intermembrane space and also cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to peptidase family M3. Ohara O.;
